Send a Voice Message

In any combination, or all at once

Every business is unique, but they all share the need to regularly alert personnel about important information – whether regarding an emergency or an important business event. Exigent911's disaster alert system replaces manual phone trees and cumbersome paging systems with a high-speed platform that automatically delivers email, text messages and voice to recipients on whatever communication device they have at hand. The system leverages multiple delivery channels and ensures employees are kept informed while meeting corporate disaster recovery and continuity planning requirements.

The result - timely, managed emergency and non-emergency communications.

Exigent911 Advantages

- Text messages are not sent via e-mail and are more reliable
- Certified e-mail engine
- Responses are captured and reported when requested
- Redundancy and data back-up
- Secure web forms

“After only 15 minutes of instruction, the process of creating a notification was incredibly simple and very user friendly. I have since been able to go back in and add contacts, telephone numbers for voice and SMS notifications as well as additional email addresses. When it comes to the nature of emergency response, we don't have the luxury of only being able to communicate during regular business hours.

With Exigent911, I can log on to the system remotely anytime day or night and alert our entire database of responders without having to call upon other resources.”

EXIGENT911

Online Disaster Alert System

Choose the package that's right for your business:

QuickReach
Text and Email

TOTALREACH
Text, Email and Voice

Email Services

We've developed strong relationships with all of the major ISPs over the last decade to help increase the chances your email is delivered and stays out of the spam folder. The industry average for inbox delivery is 81%. Exigent911's average is consistently over 98%.

Mobile Messages

Exigent911 established a relationship with one of the leading SMS Messaging providers to offer our QuickReach and TotalReach services. This provider delivers world-class redundancy and reliability to help us offer an extremely dependable and flexible mobile messaging service, regardless of the recipient's carrier or location.

Voice Services

The voice systems of Exigent911 require no pre-recording and can be send across a wide range of cellular and land phone networks. Simply type in your message and it comes through as an audio message to recipients.

Safe and Secure, Inside and Out

Our SAS70 servers are maintained in high-security, high-redundancy data centers. Featuring round-the-clock monitoring by experienced network technicians, our databases and web server clusters are climate controlled, backed up offsite every day, and can operate uninterrupted in the event of an emergency.

"It's vitally important to plan for operational needs and with hurricanes and other emergencies, there are a million things a disaster team needs to worry about and always unexpected issues to deal with. In an emergency, traditional communication methods may not be accessible or reliable. But with email and text messages, employees can access messages on their laptops or mobile phones and respond appropriately no matter where they are.

Exigent911 system certainly enhances the effectiveness of disaster communications, gets the word out immediately and, more importantly, can track responses"
